Electricity Saving Measures for Summer 2013

INPEX CORPORATION (INPEX) is pleased to announce that upon the initiatives taken by the Japanese Government for electricity saving, INPEX will make an effort to save and reduce electricity consumption during this summer season (July to September) by using in-house power generation at all of INPEX business facilities where electricity is supplied by Tokyo Electric Power Company, Tohoku Electric Power Company and Chubu Electric Power Company.

■ Operation Sites

- Reduce outsourced electricity supply by using in-house power generation of Koshijihara plant (natural gas production plant).
- Refrain from using electricity during peak consumption hours.
- Supply electricity to grid power by using excess capacity of in-house power generation of Koshijihara plant and Koshijihara electric generation plant.

■ Offices etc.

- Reduce light and turn off the lights at lunch hours and after office hours.
- Minimize the standby electricity of personal computers.
- Reduce outsourced electricity supply by using renewable energy such as solar power and wind power.

INPEX continues to enlighten employees on the importance of electricity saving by informing them of the electricity consumption at company's operation sites and offices and introducing electricity saving measures at home.
