INPEX Launches 2014 Reconciliation Action Plan in Australia

INPEX CORPORATION (INPEX) in Australia launched the second [Reconciliation Action Plan](#) (RAP) in May 2014.

The RAP outlines INPEX's reconciliation vision to build strong relationships and enhance equality and respect between Aboriginal and Torres Strait Islander (ATSI) peoples and other Australians.

The 2014 RAP builds on the solid foundation laid by the inaugural RAP in 2013 and marks INPEX's growth in the Australian business community and its commitment to building strong, respectful relationships with ATSI peoples. The RAP sets out tangible actions and measurable deliverables under three key areas - relationships, respect and opportunity.

INPEX aims to continue to grow as an organisation and embed the RAP and its commitments as part of the work culture. Raising internal awareness by promoting the RAP to staff and making it possible for them to participate in important ATSI-related activities is a key focus.

About INPEX

INPEX CORPORATION is a worldwide oil and gas exploration and production company based in Tokyo, Japan, with more than 70 active projects across 27 countries. Since 1966, INPEX has been growing steadily, from its core business areas in Australia and Indonesia to the Middle East, the Caspian Sea region, the Gulf of Mexico and North and South America. For more information, visit www.inpex.co.jp/english/index.html.

About the Ichthys LNG Project

The Ichthys LNG Project is a Joint Venture between INPEX group companies (the Operator), major partner TOTAL and the Australian subsidiaries of Tokyo Gas, Osaka Gas, Chubu Electric Power and Toho Gas. Gas from the Ichthys Field, in the Browse Basin offshore Western Australia, will undergo preliminary processing offshore to remove water and raw liquids, including condensate. The gas will then be exported to the onshore processing facilities in Darwin via an 889km pipeline. The Ichthys LNG Project is expected to produce 8.4 million tonnes of LNG and 1.6 million tonnes of LPG per annum, along with approximately 100,000 barrels of condensate per day at peak. Detailed Engineering, Procurement and Construction (EPC) of the Ichthys LNG Project is ongoing and production is scheduled to commence by the end of 2016.
