Note:
1. (1) Adjustments of segment income of ¥(9,748) million include elimination of intersegment transactions of ¥225 million and corporate expenses of ¥(9,974) million. Corporate expenses are mainly amortization of goodwill not attributable to a reportable segment and general administrative expenses.

(2) Adjustments of segment assets of ¥1,678,551 million include elimination of intersegment transactions of ¥(2,551) million and corporate assets of ¥1,681,103 million. Corporate assets are mainly goodwill, cash and deposit, marketable securities and investment securities concerned with the administrative divisions.

2. Segment income was reconciled with consolidated operating income.

**Definition of Proved Reserves**

- Our definition of proved reserves is in accordance with the SEC Regulation S-X, Rule 4-10, which defines proved reserves as the estimated quantities of oil and gas, which, by analysis of geoscience and engineering data, can be estimated with reasonable certainty to be economically producible—from a given date forward, from known reservoirs, and under existing economic conditions, operating methods, and government regulations—prior to the time at which contracts providing the right to operate expire.

- To be classified as a proved reserve, the SEC rule requires the project to extract the hydrocarbons must have commenced or the operator must be reasonably certain that it will commence the project within a reasonable time. This definition is known to be conservative among the various definitions of reserves used in the oil and gas industry.

- The SEC rule separates proved reserves into two categories; proved developed reserves which can be recovered by existing wells and infrastructure, and proved undeveloped reserves which require future development of wells and infrastructure to be recovered.
Definition of Probable and Possible Reserves

- Probable reserves, which term is defined by SPE/WPC/AAPG/SPEE, are those unproved reserves which analysis of geological and engineering data suggests are more likely than not to be recoverable.

- In this context, when probabilistic methods are used, there should be at least a 50% probability that the quantities actually recovered will equal or exceed the sum of estimated proved plus probable reserves.

- Possible Reserves, which term is defined by SPE/WPC/AAPG/SPEE, are those additional reserves which analysis of geoscience and engineering data indicate are less likely to be recoverable than Probable Reserves.

- In this context, when probabilistic methods are used, there should be at least a 10% probability that the quantities actually recovered will equal or exceed the sum of estimated proved plus probable plus possible reserves.

Medium- to Long-Term Vision

Three Growth Targets and Key Initiatives for the First Five Years

1. Continuous Enhancement of E&P Activities
   → Achieve a net production volume of 1 million boed by the early 2020s

2. Strengthening Gas Supply Chain
   → Achieve a domestic gas supply volume of 2.5 billion m³/year in the early 2020s

3. Reinforcement of renewable Energy Initiatives
   → Promote efforts to commercialize renewable energies and reinforce R&D activities for the next generation

Three Management Policies and Our Vision

1. Securing / Developing Human Resources and Building Efficient Organizational Structure

2. Investment for Growth and Return for Shareholders

3. Responsible Management as a Global Company

Core Finance Strategies

**Advantage of low-cost funding**

Maintain strong balance sheet to achieve financial stability and secure further debt capacity

Leverage relationships with governmental financial institutions, such as JBIC and JOGMEC, to fund development costs

- Maintain funding capability to ensure necessary investments, which are for major projects such as Ichthys and Abadi
- Maintain strong balance sheet to enable continuous investments in potential projects in the future
- Long-term target financial leverage
  - Equity Ratio: 50% or higher
  - Net Debt / Total Capital Employed Ratio: 20% or less
Production Sharing Contracts

1. Cost Recovery Portion
   - Non-capital expenditures incurred for production and recovered during the current period
   - Scheduled depreciation of the capital expenditures for the current period and recovered during the current period
   - Recoverable costs that have not been recovered in the previous periods

2. Equity Portion (Profit Oil)

**Accounting on Production Sharing Contract**

**Cash Out**
- Exploration Expenditures
- Development Expenditures
- Production Costs (Operating expenses)
- Acquisition Costs

**Assets on Balance Sheet**
- Project under exploration phase
  - Recoverable accounts under production sharing
- Project under development and production phase
  - Recoverable accounts under production sharing
  - Exploration and development rights

**Income Statement**
- Provision for allowance for recoverable accounts under production sharing
- Cost of sales
  - Recovery of recoverable accounts under production sharing (Capital expenditures)
  - Recovery of recoverable accounts under production sharing (Non-Capital expenditures)
- SG&A
  - Depreciation and amortization
- Other Expenses
  - Amortization of exploration and development rights
