**Commencement of Drilling Survey (Phase 3) in Bandai District, Fukushima
Prefecture for Geothermal Energy Development**

TOKYO, JAPAN - [INPEX CORPORATION](#) announced today that the Fukushima Geothermal Project Team (the Team) has completed a three-year surface survey of geothermal resources at the area around Mt. Bandai in the Bandai-Asahi National Park in Fukushima Prefecture Japan and plans to commence drilling survey at a promising area confirmed from the surface survey.

The Team has been conducting a surface survey since 2013 with the consent of local communities and the financial support from Japan Oil, Gas and Metals National Corporation (JOGMEC), it will move onto the next phase; drilling survey in the area.

The Team consists of 11 companies: Idemitsu Kosan Co.,Ltd., INPEX CORPORATION, Sumitomo Corporation, Japan Petroleum Exploration Co., Ltd., Geothermal Energy Research & Development Co., Ltd., Japan Metals & Chemicals Co., Ltd., Mitsui Oil Exploration Co., Ltd., Mitsubishi Gas Chemical Company, Inc., Mitsubishi Corporation, Mitsubishi Corporation Power Ltd., and Mitsubishi Materials Corporation.

1. Purpose and outline of the Drilling Survey

The Team will drill two exploration wells (directional) to investigate underground temperature, geological structure, and the presence of reservoir as the 3rd Phase of geothermal survey.

2. Outline of the Geothermal Resource Survey

(1) Phase 1 (completed in FY2013)

Study to propose hot spring monitoring (e.g. survey for hot spring sources, and geochemical analysis of fluids)

(2) Phase 2 (completed in FY2015)

Study to estimate the underground structure (e.g. survey for hot spring monitoring, and observation of micro-earthquakes)

(3) Phase 3 (FY2016 to 2017 (planned))

See Item 1 above.

3. A Schedule for Drilling Survey (Phase 3) (FY2016)

Action	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Jan	Feb	Mar
Preparation for drilling												
Site arrangement												
Rig up												
Drilling							BD-1 ⇒ Rig Slide ⇒ BD-2					
Rig down												
Monitoring of hot springs												
Observation of micro-earthquakes												
Summarizing data												

The schedule shown above is subject to change.

4. Schedule of the study

Based on the result of drilling survey, the Team will set up a plan for drilling development wells and present the plan to the local communities. Under the consent of the local communities, the Team will decide to move forward to the feasibility study. In this study, a drilling of geothermal fluid production wells, a drilling of re-injection wells, a demonstrative test, and an environmental assessment will be conducted.

Scene of the ceremony to pray for the safety of the drilling survey held on-site today

Drilling site information

Site	Description
Address	Tsuchiyusawayama, Inawashiro-machi, Yama-Gun, Fukushima Prefecture
Owner	Inawashiro Property Ward
Status	<ul style="list-style-type: none">• Access to the site is prohibited as it is controlled by the Inawashiro Property Ward.• Although a tour of the site is planned during the drilling survey, it is not allowed to enter the site for security and safety reasons.

A Drilling plan for Exploration wells

No.	Drilling site	Direction	Well data
BD-1	Inawashiro Property Ward	Approximately 10 degrees west from southern direction	Diameter : 8.5 inches (21.59 cm) Drilling depth: 2,300 m (maximum) Vertical depth: 1,900 m (maximum) Deviation : 1,150 m (maximum)
BD-2		Approximately 70 degrees west from southern direction	

Survey area and location of the exploration wells
